DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-38 and 53, drawn to a modular multiplier circuitry.
- II. Claims 39-40, drawn to increasing computation speed of a radix 2^N

Montgomery multiplication where $N > 1$.

- III. Claims 41-44, drawn to reducing power computation of a radix 2^N

Montgomery multiplication where $N \geq 1$.

- IV. Claims 45-47, drawn to reducing power computation of a radix 2^N

Montgomery multiplication where $N > 1$.

- V. Claims 48-50, drawn to reducing power computation of a radix 2^N

Montgomery multiplication where $N \geq 1$.

- VI. Claims 51-52, drawn to reducing power computation of a radix modulus recorder. The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III, IV, V, and VI are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination I has separate utility such as the makeup of a modular multiplier. Subcombination II has separate utility such as to increasing computation speed of a radix 2^N Montgomery

multiplication. Subcombination III has separate utility such to reducing power computation of a radix 2^N Montgomery multiplication where $N \geq 1$. Subcombination IV has separate utility such as to reducing power computation of a radix 2^N Montgomery multiplication where $N > 1$. Subcombination V has separate utility such as reducing power computation of a radix 2^N Montgomery multiplication where $N \geq 1$. Subcombination VI has separate utility such as reducing power computation of a radix modulus recorder. See MPEP § 806.05(d).

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the election invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.
